V16 | Actual WBC controller and physical loop

Whole-body QP job 577. Control update 20 ms; PhysX and emergency motor envelope 5 ms. All paths below are used by the runtime.

QP CONSTRAINTS AND LIMITS

$M_b a + h_b = J_b^T \hat{\lambda}$	$J_c a = a_c$	friction / normal force	motor torque bounds

Gait/IK builds q_r; the dashed model path supplies h. QP and torque reconstruction share M, h, J. Predicted force differs from physical contact.
